

Cable Management System

The TES Cable Management System is specifically designed to keep your charging station cables impeccably clean and meticulously organized. Not only does it enhance the aesthetic appeal of your property, but it also offers unrivaled convenience for electric vehicle drivers. With this system, drivers can effortlessly extend the cable to the precise length required for their vehicle's charge port. The cleverly designed lanyards provide continuous support to the charger cable, ensuring that it remains elevated above the parking lot surface at all times. Once the charging session is completed, drivers can simply return the plug to the end of the unit housing, and watch in awe as the cable gracefully retracts, forming a flawlessly tidy and well-organized loop. The versatility of the Cable Management System allows for both wall and pedestal mounting options, with the choice of single or dual access, as illustrated below.
